PLATFORMS FOR **LED VIDEO WALLS**

CREATE A LED WALL PLATFORM Our sturdy platforms are perfect for many heavy-duty applications, one of which is to stand a LED wall on.

PLATFORMS FOR LED VIDEO WALLS

Our sturdy platforms are perfect for many heavy-duty applications, one of which is to stand a LED wall on, to gain more height on the screen set-up.

Create a LED wall platform in those situations where there isn't enough space at the installation site for modular towers and where not as much height is needed: in advertising and commercial installations, during shows or live performances, for presentations and conferences, or for giant screens for re-transmission of sporting or other events.

**GUIL,
SAFETY in your hands**

GUIL manufactures platforms with a very high load capacity (up to 1600 Kg/m²), by simply choosing the suitable model for your requirements, with 4, 6 or 8 legs.

THE BEST COMBINATION: STRENGTH & STABILITY

As our platforms are heavy-duty and extremely versatile, they are perfect for rental companies who use them for multiple purposes; a stage one day, a car exhibition the next and even for LED video walls.

Acoustic isolation

Our LED wall platforms are assembled using adhesive foam, screws and silicone, to prevent vibrations and noise.

Indoor and outdoor use

Thanks to its weather resistant panel, composed of phenolic resin coated layers, and its aluminium legs and framework, GUIL LED wall platforms are a perfect choice for both indoor and outdoor events. They also have a fire-resistant treatment for venues with the strictest health and safety requirements.

Versatile – Personalise your LED wall platform

Our LED video wall platforms can be personalised in size, colour and height. As manufacturers we can make any size platform you require, with the possibility of painting the profile and legs whatever colour you like. Thanks to their plug-in design you can achieve different heights by simply adding different sets of legs (for fixed and also adjustable height).

Presentations and conferences, and similar can be made more eye-catching by placing at the front of the stage area a single row of platforms with transparent methacrylate panels, lit from underneath, with the LED wall on plywood platforms behind (using the models below).

For more information about our platforms for LED video walls, click on the following links:

Platforms with wooden panel and plug-in legs (interchangeable):

[TM440 \(4 Legs - 1200 Kg/m²\)](#)

[TM440XL \(6 Legs - 1400 Kg/m²\)](#)

[TM440XXL \(8 Legs - 1600 Kg/m²\)](#)
